Help Advance Research on Music Enjoyment and Hearing Loss

Are you or someone you know interested in how hearing loss a4ects the enjoyment of music? A research team at Johns Hopkins University, led by Dr. Alexander Chern, is conducting a study to identify the factors that contribute to music enjoyment for people with hearing loss, with the goal of improving music enjoyment for these individuals.

How you can participate:

- **Survey**: A short, 10-15-minute online survey about your hearing and music background
- **Interview**: Some participants will be invited to take part in a 40-minute interview to discuss what music enjoyment means to them

We are specifically looking for:

- **Hearing aid users** (who do not use a cochlear implant)
- **Cochlear implant users** with **poor speech and word recognition**

  OR
- **Anybody 65 years old or older**

Your participation can help improve music listening for those with hearing loss and contribute to advancing hearing aid and cochlear implant technology.

Interested?

To learn more about the study, please fill out our pre-intake form. We will reach out with further instructions including a customized link to our intake survey.
